Install Xcode and command-line tools If you are using OS X, and install it Then by entering the following command in the terminal: xcode-select --install.. You can easily check this by opening the terminal and entering the command python3.. py --destdir ~/ venv/qtproject/lib/python3 4/site-packages --qmake /opt/qt/5 6/clang_64/bin/qmake # Make and install \$ make # this takes a really long time \$ sudo make install \$ sudo make clean All Done!At this point, everything is successfully installed! Now let's check if everything works by importing PyQt5 from Python 3.. Python Install PyQt4# Create the directory \$ mkdir -p ~/ venv # Create the virtual environment \$ python3 -m venv ~/.. # Extract the tar gz file \$ tar -xvf PyQt-gpl-5 5 1 tar gz # Change into the PyQt source directory \$ cd PyQt-gpl-5.
